Staff Parking API

For the Intranet team. After login, show an employee their reserved HQ parking bay.

What to build

After a staff member signs in to intranet.neweast.cloud, call this API with their email. If HR reserved a bay, show the message. If not, hide the widget.

1. Endpoint

URL	`https://guest.neweast.cloud/api/intranet/parking`
Methods	`GET or POST`
CORS	`https://intranet.neweast.cloud`

2. Authentication

Send the shared key on every request. Prefer calling from intranetapi so the key stays off the public frontend.

Header	`X-Intranet-Key: fd805472684a09d0183f64969ece0e9b144cabcd9ff43f60`
Or	`Authorization: Bearer fd805472684a09d0183f64969ece0e9b144cabcd9ff43f60`

3. Identify the signed-in employee

Send one of these. Email is preferred: USER_EMAIL from intranet login. .co and .com both match.

email	`USER_EMAIL` e.g. sakour@neweast.co
empId	`EMP_ID / payroll number` e.g. 101908

4. Call it after login

GET

```
GET https://guest.neweast.cloud/api/intranet/parking?email=sakour@neweast.co
X-Intranet-Key: fd805472684a09d0183f64969ece0e9b144cabcd9ff43f60
```

POST

```
POST https://guest.neweast.cloud/api/intranet/parking
X-Intranet-Key: fd805472684a09d0183f64969ece0e9b144cabcd9ff43f60
Content-Type: application/json

{ "email": "sakour@neweast.co" }
```

5. JavaScript example

```
const res = await fetch(
  "https://guest.neweast.cloud/api/intranet/parking?email=" + encodeURIComponent(userEmail),
  { headers: { "X-Intranet-Key": KEY } }
);
const parking = await res.json();
if (parking.assigned) showBanner(parking.message);
```

6. They have a bay - HTTP 200

Show parking.message on the home screen.

```
{
  "assigned": true,
  "name": "Jad Sakour",
  "slot": "C33",
  "zone": "C",
  "number": 33,
  "section": 1,
  "plate": "AD-22-75348",
  "vehicleType": "SUV",
  "label": "Parking number 33 in Zone C",
  "message": "Your parking bay is number 33 in Zone C."
}
```

7. They do not - HTTP 200

Do not show a parking widget.

```
{ "assigned": false }
```

8. Errors

401	`{ "error": "Unauthorized." }` missing or wrong key
400	`{ "error": "Send email or empId." }` no identifier sent
503	`API key is not configured on Guest Management`

9. Notes

Call this only after intranet login, for the signed-in person. Never let one employee query another.

Keep the key on the server (intranetapi.neweast.cloud) if you can. It is a shared secret.

Unknown emails and people with no reserved bay both return assigned: false.

Administration assigns bays from Guest Management > Assign parking.
